

Chindam Venkatesh

DevOps Engineer

✉ chindamv333@gmail.com ☎ +91 74167 39205 📍 Hyderabad

Professional Summary

Experienced Cloud DevOps Engineer with 7+ years of expertise designing, implementing, and managing scalable, multi-cloud infrastructure across AWS & Azure. Proven leader in CI/CD pipeline automation, advanced monitoring, cost optimization, and zero-downtime deployments. Expert in Infrastructure as Code (Terraform, Bicep, ARM), Kubernetes, Docker, Helm. Deep DevSecOps practitioner integrating security, compliance, and automated testing. Skilled with performance testing, disaster recovery, distributed tracing, and feature flag management. Strong focus on collaboration, process documentation, and mentoring.

Core Competencies

Cloud Platforms

AWS (EC2, S3, EKS, RDS, Lambda), Microsoft Azure (AKS, Azure DevOps, VMs, Storage, App Services)

Monitoring & Logging

Prometheus, Grafana, ELK Stack, Datadog, CloudWatch, Azure Monitor, custom Application Insights dashboards, distributed tracing (OpenTelemetry)

Performance & Testing

Automated performance/load testing, synthetic monitoring, SLA tracking, rollback/blue-green/canary deployments

IaC & Automation

Terraform, Ansible, ARM, Bicep, Helm

Scripting

Python, Bash, PowerShell (infra automation, performance validation, log parsing)

Cost Optimization

Savings Plans, Azure Cost Management, resource scheduling, custom cost alerts

Containers & Orchestration

Docker, Kubernetes (AKS, EKS), Helm, service mesh basics (Istio)

Version Control

Git, Azure Repos, Bitbucket

Collaboration & Mentoring

Cross-team DevOps alignment, onboarding, technical/process documentation, mentoring juniors

CI/CD Tools

Jenkins, GitHub Actions, Azure DevOps, ArgoCD, GitLab CI basics

DevSecOps & Compliance

DevSecOps pipeline integration, SAST/DAST, Trivy, SonarQube, security baseline & patch automation, compliance (SOC2, GDPR basics)

Professional Experience

DevOps engineer, IBM

Worked across three enterprise client engagements in the **Banking, E-commerce, and Healthcare** domains, delivering end-to-end DevOps solutions on AWS and Azure. Designed and managed CI/CD pipelines, Infrastructure as Code, Kubernetes platforms, cloud automation, monitoring, and production support while ensuring secure, scalable, and highly available environments. Collaborated with cross-functional teams to streamline software delivery, improve deployment reliability, and automate operational processes across multiple business-critical applications.

02/2019 – Present
Hyderabad

Project -3 Healthcare

06/2025 – Present

- Designed and deployed automated, production-grade multi-cloud infrastructure (AWS & Azure) with modular Terraform, ARM, and Bicep, supporting secure environments for dev/staging/prod
- Led migration of microservices to Kubernetes (AKS/EKS), used Helm for packaging, implemented service mesh (Istio) basics for traffic management
- Built & optimized CI/CD pipelines (Jenkins, GitHub Actions), integrated automated build, test, security scan (SAST/DAST), and performance/load test stages
- Implemented distributed tracing (OpenTelemetry), custom dashboards (App Insights, Grafana) for end-to-end observability
- Orchestrated blue-green, canary, and progressive delivery deployments, reduced downtime & validated release performance
- Automated cost monitoring, achieved 20% annual cloud savings via resource right-sizing, scheduling, and Azure Advisor
- Secured pipeline secrets with Vault, Azure Key Vault; enforced IAM and privileged access management
- Established DR strategy with automated backups, recovery drills, RTO/RPO monitoring, and high-availability configuration
- Developed internal automation tools/scripts (Python/Bash) for developer self-service, config management, and log parsing
- Spearheaded DevSecOps best practices; added vulnerability and compliance checks to pipelines (Trivy, SonarQube, Dependency-Check)
- Documented DevOps processes, ran onboarding sessions for new engineers, mentored cross-functional teams

Project -2 E-commerce

06/2022 – 06/2025

- Managed Git/Azure Repos, enforced code quality, branching, and release controls for modernized Azure cloud infra
- Built YAML-based CI/CD, automated build/release/testing/security scans, enabled performance validation in Azure DevOps
- Automated cloud provisioning (ARM/Bicep/Terraform)
- Configured/maintained Azure resources (AKS, VMs, Load Balancer, NSGs, Key Vault)
- Deployed & managed AKS with service mesh intro, automated SSL/TLS regime, feature flags, blue/green deployments
- Implemented custom monitoring (AppDynamics, Azure Monitor, Grafana), incident/change management (ServiceNow)
- Authored technical onboarding documentation, collaborated on compliance and security initiatives

Project -1 Banking

02/2019 – 05/2022

- Provided L2 support for Azure DevOps pipelines, resolving build and release failures across multiple environments
- Monitored CI/CD pipelines and Azure infrastructure (VMs, AKS), ensuring high availability and quick issue resolution
- Investigated deployment failures, performed root cause analysis, and implemented fixes to prevent recurrence
- Managed incidents and change requests using ServiceNow, improving resolution time
- Supported Linux-based applications, handled log analysis, and troubleshooting production issues
- Assisted in automation of routine tasks using scripts (Bash/Python)
- Worked with teams to ensure smooth deployments and environment stability

Education

BSc Computer Science, *Satavahana University*
Graduated

Karimnagar
